SOIL HEALTH ANALYSIS REPORT

Farmer Name: Bala

Farm Location: Patna, Bihar, India

Target Crop: General Crops

Analysis Date: 07 August 2026

Overall Soil Health Score: 75/100

Category: Good

75%

Soil Parameters & Nutrient Evaluation

Parameter	Measured Value	Optimal Range	Nutrient Status
Nitrogen (N)	45 mg/kg	30 - 60 mg/kg	**Optimal**
Phosphorus (P)	28 mg/kg	20 - 45 mg/kg	**Optimal**
Potassium (K)	40 mg/kg	30 - 60 mg/kg	**Optimal**
Soil pH	6.5	6.0 - 7.5	**Optimal (Neutral)**
Organic Carbon	0.75%	> 0.75%	**Good**
Moisture / Temp / Humidity	55% | 28°C | 62%	40-70% / 20-32°C	**Normal**

AI Agronomic & Fertilizer Recommendations

Recommended Fertilizer:	Apply 120 kg/ha Urea split into 3 doses, 60 kg/ha DAP at sowing.
Organic Manure:	Incorporate 5 tonnes/ha Vermicompost or Farmyard Manure (FYM) 2 weeks prior to sowing.
Suitable Crops:	Rice, Wheat, Tomato, Cotton, Sugarcane, Maize
Soil Improvement:	Apply Neem Cake (250 kg/ha) to enhance Nitrogen utilization and reduce soil pest risk.
Water Management:	Maintain drip irrigation schedule of 25-30 mm/week based on soil moisture levels.

Overall AI Agronomist Summary

Based on the AI soil analysis, your soil demonstrates a health score of **75/100** (Good). Nitrogen level is optimal and Phosphorus is optimal. Following the recommended NPK and organic manure regimen will optimize soil structure, microbial health, and yield potential for General Crops.
